- Other voltages on request. Consult Technical support; see contact details on front cover.
- 2NC version supplied on request.
- The last (NC) pole has the same characteristics as the power pole. It can therefore be used indifferently as an auxiliary or as a NC power contact.
- The fourth NO or NC pole has the same characteristics as the power poles; therefore it can be used indifferently as auxiliary or as power contact.
- On request can be supplied: 4NC power poles. Consult Technical support; see contact details on front cover.
- Can also operate at 220VDC.
- No auxiliary contacts can be mounted.

Maximum number of contactors side-by-side

When contactors are mounted side by side and operate in continuous service (1 hour), spacing is needed between equipment to allow appropriate cooling.

9mm spacing is required; there is an accessory, called half-module spacer, order code CNX80, for this specific type of mounting. The following table indicates details of the space needed between each.

Maximum number of contactors to be mounted side-by-side without spacing; the CNX80 spacer is required when the number of pieces is more than the indicated below:

❶ Usually each LED lamp has one ballast.

In event of one ballast supplies several lamps, the calculation has to consider the number of supplied ballasts.

E.G. If the LED lamp ballast input current is 500mA, (consider CN40=11,000/500=22), the maximum number of ballasts admitted per each pole of CN40 contactor is 22.
