POWER ANALYZERS WITH WIDESCREEN COLOUR LCD DMG SERIES

WIDESCREEN COLOR LCD
The large size of the colour LCD (4.3") allows for the optimal view of measures and parameters in a clear, simple and intuitive way.
The standard cutout dimensions (92x92mm) ensures a perfect compatibility with the usual front panel solutions.

10 LANGUAGES
The language shown can be selected from a large number of choices: English, French, German, Italian, Spanish, Portuguese, Polish, Russian, Czech, Chinese.

PROGRAMMABLE LEDs
3 front LEDs are programmable and let the user know the status of the device at any time: alarms programmed by the user, status of digital inputs or outputs, emission of pulses indicating energy consumption, communication in progress.

HIGH ACCURACY LEVEL FOR MEASUREMENTS
The measurements are verified according to the recognized international standards for measuring instruments: IEC 62053-22 (class 0.5s), IEC 62053-24 (class 1) and IEC 61557-12 (class 0.5).

NFC CONFIGURATION
Thanks to NFC technology, it is possible to configure and modify parameters (even when the device is not powered) through **NFC LOVATO** App, which can be downloaded for free from the Google Play Store and App Store for Android and iOS smart devices.

PLC LOGIC
Thanks to the built-in PLC logic, the power analyzers can perform simple automations related to timers and alarm states and digital inputs. Programming with "contacts" (**Ladder**) is simple and intuitive thanks to the use of **Xpress** configuration software.

MEASUREMENTS
DMG power analyzers display all the measurements useful for a complete check of the electrical network. The voltage measurement input does not require external transformers **up to 600VAC**.

CHARTS AND HARMONICS
The electrical measurements are shown with waveform charts, polar diagrams and representations of the **harmonic spectrum up to the 63rd order** which is a useful tool to better understand the state of the system.

STATISTICS
The DMG9000 model also provides statistics on the quality of the network according to the **EN50160** standard - class C - (voltage dips, overvoltages, interruptions, low frequency noises and much more).

EXPANDABILITY AND COMMUNICATION

● **EXPANDABILITY**

Possibility to add **up to 3** EXP... series expansion modules (additional inputs, outputs and communication ports).

● **INTEGRATION WITH SIGNALS FROM THE FIELD**

Thanks to the EXP... expansion modules it is possible to add **digital and analog inputs** by which field measurements such as gas or water consumption, tank levels, temperatures, pressures and much more are integrated into the data collection in order to obtain a complete energy management.

● **OPTICAL PORT**

The optical port compatible with the communication devices CX01 and CX02 is available and allows, thanks to **Xpress** software, the parameter configuration, the electrical network diagnostics and the firmware update of the power analyzer.

● **DEGREE OF PROTECTION: IP65**

Possibility of use in harsh environments thanks to the gasket on the back which guarantees the **IP65** degree of protection.

● **COMMUNICATION**

Availability of models with built-in **RS485** and **Ethernet** communication ports.

● **EASY BRANCH POWER MONITORING SYSTEM**

Thanks to the EXS... modules, a simplified and very fast wiring can be achieved in panels where it is necessary to read the electrical parameters of different loads, drastically reducing the costs and the installation times.

WEB-SERVER FUNCTION IN DMG8000 AND DMG9000

● **SETTING OF ALL PARAMETERS**

The programming of the parameters, as well as from the front panel, can also be done through the browser on a PC. The built-in web-server also allows the setting of the parameters of the EASY BRANCH power monitoring system, such as the descriptions of the individual measurement points.

● **WEBSERVER AND BUILT-IN DATA MEMORY**

A flash data memory allows archiving of historical data. Through the built-in webserver the user can:

- select the measures (up to 128);
- set the sampling frequency;
- download the .CSV file with the acquired informations.

For example, by sampling 20 measurements with 1 minute of sampling time, 10 days of data can be stored.

● **MEASUREMENT VIEW**

Representation of the measured values by means of tables and charts.

EASY BRANCH POWER MONITORING SYSTEM

When inside an electrical panel the parameters of several loads have to be monitored, **EASY BRANCH** power monitoring system is a more efficient and simple alternative solution to install than the traditional one which requires an independent instrument for each measuring point. The electrical distribution panels in shopping centres or in the departments of a production facility represent ideal applications for **EASY BRANCH** system by LOVATO Electric.

SYSTEM COMPONENTS

DMG7500 - 8000 - 9000
Power analyzer

● **DMG7500, DMG8000, DMG9000 power analyzers.**

The power analyzers represent the heart of the system: they measure the electrical voltage in the switchboard and the input current, record the total measurements upstream of the distribution and the measurements of each individual monitored load available on their display. The electrical quantities can also be viewed via the built-in communication ports (RS485 or Ethernet).

On the **DMG8000** and **DMG9000** models, the system measurements can be viewed within a web page and can be recorded in the data memory to get historical trends.

EXS0000
Bus module

● **EXS0000 bus module**

Installed in one of the expansion slots of the power analyzer, by using a standard Ethernet cable (cat.6) it connects and supplies **up to 8 current measuring modules EXS4...** which are automatically recognized without the need for settings by the installer.

When connecting 5 or more EXS4 current modules ... the **EXS0000** bus module requires a 24VDC - 0.2A power supply.

MAX 8 EXS4... current measuring modules can be connected to the EXS0000 bus module, to monitor up to:

- 33 three-phase loads;
 - 99 single phase loads.
- Including the loads connected to the power analyzer.

EXS4000
Current measuring module with 4 inputs for electronic RJ45 CTs

● **Current measuring module EXS4000**

The module collects the measurements of the loads monitored by the electronic current transformers EXS3... (three-phase or single-phase) or EXS1... (single-phase). Each module measures **up to 4 three-phase loads or 12 single-phase loads** or a mixed single-phase and three-phase configuration. The module automatically recognizes the connected electronic current transformer and highlights, through diagnostic LEDs, the correct self-configuration of the measurement points and the correct coupling with the power analyzer.

Correct self-configuration LED

EXS1... - EXS3...
Electronic current transformer

● **Electronic current transformers EXS1... and EXS3...**

They are current transducers suitable to be installed immediately downstream of the magnetic circuit breakers thanks to their compact size. Available **for single-phase or three-phase loads**, the diameter and pitch of the pass-through holes have been designed to be in line with the ones of the MCBs:

- for sizes up to 63A: $\varnothing = 7\text{mm}$ and 18mm pitch;
- for sizes up to 125A: $\varnothing = 12\text{mm}$ and 27mm pitch.

They connect to the EXS4000 current monitoring module via pre-wired **2 meter RJ45 cable**, thus making the connection fast and fail-safe.

EXS3 ... can be programmed to manage even single-phase loads.

Correct coupling signalling LED

● **Current measuring module EXS4001**

It offers the possibility of connecting monitored measuring points with traditional current transformers within the EASY BRANCH system, managing for each module **up to 2 three-phase loads or 6 single-phase loads** or a mixed single-phase and three-phase configuration. Current transformers of any type with secondary /5A or /1A can be used. The module highlights the successful coupling with the power analyzer through diagnostic LEDs.

Correct coupling signalling LED

EXS4001

Current measuring module with 2 inputs for three-phase traditional CTs or 6 inputs for single-phase traditional CTs

DM...
Current transformers

● **Traditional current transformer DM...**

Current transformers (CTs) type DM... are mounted in an electrical system to reduce the line current to a secondary value of 5A and compatible with EXS4001 current measuring modules.

They are available in many versions:

- with wire-wound primary for reduced currents;
- solid core type;
- high precision for very accurate measurements;
- split-core and pre-wired types which are suitable for updating the panels;
- **primary current from 5 to 4000A.**

● **Gateway data logger**

A gateway data logger is the key device for the implementation of a modern and well-designed energy monitoring system.

It collects data from LOVATO Electric devices or from environmental sensors relating to any type of energy carrier (water, air, gas, electricity and steam) equipped with a compatible protocol.

The data collected, as well as being represented by the integrated web-server, can be transmitted to **Synergy** supervision software of LOVATO Electric or forwarded to remote servers in formats suitable for appropriate processing.

EXCGLA01
Gateway data logger

● **Supervision software**

All the data of the EASY BRANCH system are available on the central power analyzer and, through its communication ports, it is possible to collect them remotely by connecting directly with a browser if the model chosen is DMG8000 or DMG9000, or through **Synergy** software installed on a local server, or using **Synergy** Cloud if the gateway data logger EXCGLA01 is added to the system.

SYNERGY
Supervision software

EASY BRANCH PLUG & PLAY SYSTEM ADVANTAGES

● **4 COMPONENTS NEEDED**

The EASY BRANCH system consists of a few elements to add to the power analyzer: EXS0000 module to get the communication bus, the EXS4... module to measure currents and the EXS1..., EXS3 electronic current transformers... or traditional /5A or /1A CTs.

Up to 33 three-phase or 99 single-phase measuring points can be obtained!

● **DRAMATIC REDUCTION OF WIRING TIMES**

In a monitoring system with traditional measuring instruments, 4 voltage and 6 current cables are required for each three-phase measuring point and two additional cables for the auxiliary power supply are added: a total of 12 cables to be connected for each measuring point.

With the EASY BRANCH system, for each additional current measuring module (EXS4000) only one cable with RJ45 terminal must be connected, getting 4 three-phase or 12 single-phase measurement points, each of which is connected with a cable with RJ45 terminal, drastically reducing the wiring time.

● **STOP TO WIRING MISTAKES!**

In a monitoring system with traditional measuring instruments, 12 cables to be connected for each three-phase measuring point can cause various wiring errors (phase sequence, phase correspondence between voltages and currents, current transformers sense) which cause errors in reading the electrical quantities and delay the commissioning of the switchboard. The EASY BRANCH system, thanks to the **RJ45** connections of the electronic CTs, is foolproof!

● **SETTING TIME REDUCTION**

EXS1... and EXS3... electronic transformers have a **self-recognition** system with the current module to which they are connected, avoiding the installer the need to set the CT primary and the type of connection (single-phase, three-phase). A LED on the electronic transformers indicates the correct power supply, while a LED on EXS4000 current measuring module indicates the correct coupling.

● **NO SPECIAL CABLES NEEDED**

No special cable is needed to connect the current measuring modules to EASY BRANCH bus: **a standard Cat.6 Ethernet cable is enough.**

● **COMPARISON BETWEEN EASY BRANCH AND TRADITIONAL MEASURING SYSTEMS**

If 5 three-phase loads are to be monitored in an electrical panel:

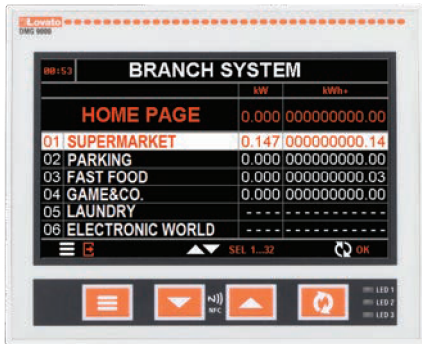

- **EASY BRANCH SYSTEM:** 1 power analyzer, 1 display where to search for measurements, 1 EXS0000 bus module, 1 EXS4000 current measuring module, 4 three-phase electronic transformers and only 12 cables to be wired
- **TRADITIONAL SYSTEM:** 5 multimeters, 5 displays where to search for measurements, 15 current transformers and 60 cables to be wired.

The more the measuring points increase, the more the advantages in favour of the EASY BRANCH system are evident.

● **MEASUREMENT ACCURACY**

The EASY BRANCH system guarantees high measurement accuracy according to IEC61557-12 and IEC62053-22/23 standards.

General characteristics

The UTF (Finance Technical Office) certification is required in Italy in case of applications where taxes have to be paid due to energy production (Italian regulations for plants >20kW). The certificates must be associated to the energy meter (MID version, see page 25-12 for selection) and to each single current transformer is needed.

The DM...TP type accuracy current transformers (CTs) can be provided in a kit version made by three CTs and relative UTF certificates.

If required, the fifth certificate relevant to the meter and current transformer combination can be supplied as well.

The DM...TP type accuracy current transformers (CTs) are installed in an electrical system to reduce the line current to a secondary value of 5A compatible with the ammeter inputs of the digital multimeters or protection relays.

DM...TP are accuracy current transformers in class 0.5s without a primary winding and are normally used for high primary current values starting from 60A.

The number of loops of the primary cable does not modify the accuracy but converts the primary current value proportional to secondary current (see page 25-33).

Operational characteristics

- Operating frequency: 50...60Hz
- Secondary output current: 5A
- Overload withstand: 120% I_{pn}
- Rated insulation voltage U_i: 720V
- Rated short time thermal current I_{th}: 40-60I_{pn} for 1 second
- Rated dynamic current I_{dyn}: 2.5I_{th} for 1 second
- Insulation (dry type): class E
- Screw fixing terminals
- Sealable terminal covers
- Fixing on 35mm DIN rail (IEC/EN/BS 60715) or by screws (fixing elements standard supplied with the product)
- EN degree of protection: IP30.
- Ambient conditions
 - Operating temperature: -25...+50°C
 - Storage temperature: -40...+80°C.
 - Relative humidity, non condensing: 90%.

Compliance

Compliant with standards: IEC/EN/BS 61869-2, IEC/EN/BS 61869-1.

General characteristics

DMG... power analysers display electrical values on their large colour LCD display with exceptional accuracy to enable precise monitoring of power grids. They are designed in flush-mount housing (cutout 92x92mm/3.62x3.62") with 3 slots for EXP series plug-in expansion modules to adapt them to a variety of applications.

The use of NFC technology allows the user to configure the unit and make settings with a smart device. The optical port on the back of the unit enables the user to make settings, run power grid diagnostics and update the unit's firmware. The graphic interface, available in 10 languages (English, French, German, Italian, Spanish, Portuguese, Polish, Russian, Czech and Chinese), has been designed to facilitate the display of data, including:

General characteristics

The EASY BRANCH multi-circuit metering system is a modern solution to the need for electrical parameter metering when more than one load is to be monitored inside a single electrical enclosure. Each DIN rail mounting current metering unit can monitor 2 or 4 measurement points and display the values on the DMG7500, DMG8000 or DMG9000 power analysers to which it is connected, thus centralising the display of data, which includes:

- Phase current
- Measurements on 4 quadrants
- Power (active, reactive and apparent phase and total power)
- Power factor (phase and total)
- Maximum (HIGH), minimum (LOW) and average (AVERAGE) of all measured values
- Peak power/current (max demand)
- Current asymmetry and active power unbalance
- Total harmonic distortion (current)
- Current harmonic analysis up to the 63rd order
- Active, reactive and apparent energy metering (partial and total).

The RJ45 port on the EXS4000 metering module provides foolproof connection of EXS1... and EXS3... electronic current transformers.

The values can also be monitored using the communications ports of DMG... power analysers, to which up to 8 current metering modules can be connected in cascade thanks to the integrated communications bus with standard Ethernet cable (cat. 6), which also provides power.

Connecting 5 or more EXS4... current metering modules requires a 24VDC-0.2A power supply. Each measurement point can be configured as single- or three-phase, up to a total of 33 three-phase or 99 single-phase points.

Operational characteristics of EXS4... current measuring modules

- Power supplied by the bus cable (connecting 5 or more EXS4... current metering modules requires a 24VDC-0.2A power supply)
- nominal input current:
EXS4000: 32A, 63A, 80A or 125A, depending on the connected EXS1... or EXS3... electronic transformer.
EXS4001: 5A or 1A via external current transformer
- Accuracy (IEC/BS 61557-12):
 - current: Class 0.5 (Iref = 5AAC)
 - power: Class 1 (active), Class 2 (reactive)
 - power factor: Class 1
 - THD and current harmonics: Class 5
 - active energy: Class 1
 - active energy: Class 1 (IEC/EN/BS 62053-21)
 - reactive energy: Class 2 (IEC/EN/BS 62053-23)
- Diagnostics LED indicates correct power supply and electronic current transformer recognition
- Mounts to 35mm omega rail (IEC/EN/BS 60715).

Operational characteristics of EXS1... - EXS3... electronic current transformers

- Diagnostics LED to confirm connection
- Pre-wired cable: 2m
- RJ45 connector.

General characteristics

The current transformers (CTs) in the DM series are installed in an electrical system to reduce the line current to a secondary value of 5A compatible with the ammeter inputs of the digital multimeters or protection relays.

DMOTW... are instrument transformers in class 1/0.5 wound primary type and are normally used for low primary current values starting from 5A.

DM... are instrument transformers in class 1/0.5 without a primary winding and are normally used for high primary current values starting from 40A.

The number of loops of the primary cable does not modify the accuracy but converts the primary current value proportional to secondary current.

General characteristics

The DM...TP type accuracy current transformers (CTs) are installed in an electrical system to reduce the line current to a secondary value of 5A compatible with the ammeter inputs of the digital multimeters or protection relays.

DM...TP are accuracy current transformers in class 0.5s without a primary winding and are normally used for high primary current values starting from 60A.

The number of loops of the primary cable does not modify the accuracy but converts the primary current value proportional to secondary current.
